

ANTEKAUTOMATION.COM – 30 PAGES AUDITED

62
out of 100

Strong technical foundations. Brand authority is the bottleneck holding you back from AI search visibility.

Your site scores 82/100 on both technical infrastructure and schema markup — significantly ahead of most agencies your size. SSR on Vercel, 20 JSON-LD blocks, all AI crawlers allowed, llms.txt with full companion file. The engineering is done right.

The problem is entity recognition. At 28/100 for brand authority, AI models can technically crawl your site but don't know who you are. No Wikipedia. YouTube has 6 subscribers. LinkedIn has 1 follower. When someone asks 'best AI automation in Hampshire,' UiPath and Zapier answer instead of you.

The fix is specific and achievable: create a Wikidata entry, fix your GBP categories, launch a blog, get 10+ reviews on Trustpilot, and start publishing on YouTube. Your technical foundation means these changes will convert into visibility fast. Projected score after one month of action: 75/100.

AI CITABILITY

62/100

TECHNICAL GEO

82/100

BRAND AUTHORITY

28/100

SCHEMA & STRUCTURED DATA

82/100

CONTENT E-E-A-T

72/100

PLATFORM OPTIMIZATION

64/100

WHERE EACH AI PLATFORM SCORES YOU

platform by platform

All nine platforms are looking for the same signals. Here is how you score on each.

GOOGLE AI OVERVIEWS

74

CHATGPT WEB SEARCH

62

PERPLEXITY AI

55

GOOGLE GEMINI

72

BING COPILOT

54

GROK (XAI)

58

DEEPSEEK

60

META AI

52

MISTRAL (LE CHAT)

56

You score highest on Google platforms (AIO 74, Gemini 72) because your schema and technical setup align with Google's extraction patterns. Perplexity (55) and Meta AI (52) are weakest — Perplexity weights Reddit presence heavily and you have none; Meta AI relies on its own ecosystem where you're barely active.

WHAT'S ACTUALLY BROKEN

the problems

2 critical. 4 high priority. Here is what matters most.

01 No Wikipedia or Wikidata presence

The single strongest signal for AI entity recognition is absent. All 9 AI platforms use Wikipedia/Wikidata for entity verification. Without it, AI models lack confidence that Antek Automation is a real, notable entity.

02 Brand authority at 28/100 – near-invisible entity footprint

YouTube (6 subscribers), LinkedIn (1 follower), Reddit (negligible), no Trustpilot, no G2. Your technical infrastructure is excellent but AI models can't verify who you are through third-party signals.

03 Google Business Profile categories are wrong

Listed as 'manufacturer' and 'telecommunications_service_provider' instead of AI consultant or business automation service. GBP feeds directly into Gemini — wrong categories mean wrong query matching.

04 No blog or resource content

Zero articles, guides, or educational content. This limits topical authority, freshness signals, and citability surfaces across all platforms.

05 No IndexNow support

Bing Copilot and ChatGPT cannot discover content changes efficiently. A 30-minute fix on Vercel that immediately improves two platform scores.

06 Missing Content-Security-Policy header

The most significant missing security header. Required for enterprise client trust. Configurable via vercel.json.

07 Founder bio lacks substantiation

'30+ years in technology' is stated but not evidenced with specific roles, companies, or achievements. Detailed career history would significantly boost expertise signals.

08

Only one detailed case study visible

The Deccan Grill case study is excellent. Adding 2-3 more across trades, finance, and operations would demonstrate breadth of experience.

09

Organization schema missing recommended properties

No description, email, contactPoint, openingHoursSpecification, or priceRange on the LocalBusiness entity. Easy additions for rich result eligibility.

QUICK WINS — IMPLEMENT THIS WEEK

this week

High impact, low effort. None of these require a developer.

01

Fix GBP categories to 'AI consultant' / 'software company'

Wrong categories mean Gemini matches you to wrong queries. 15-minute fix with immediate impact.

02

Add missing Organization schema properties

Add description, email, contactPoint, openingHours, priceRange to LocalBusiness JSON-LD.

03

Add image and knowsAbout to Person schema

Tells AI models what Andy Norman is an authority on. Missing author photo weakens trust.

04

Implement IndexNow on Vercel

Notify Bing of content changes in real-time. Submit key file and configure API ping on publish.

05

Add Content-Security-Policy header

Configure via vercel.json. Start with report-only mode to identify violations.

06

Add speakable markup to About page

Only page of the 4 analyzed that lacks it. Consistency strengthens AI-readability.

30-DAY ACTIONS — SCHEMA AND INFRASTRUCTURE

this month

These are the changes that move your score into the 60s and beyond.

01

Create Wikidata entry for Antek Automation

Instance of: company, industry: AI, location: Andover, founder: Andy Norman. Then add sameAs link to schema. The single highest-impact entity action.

02

Add 2-3 detailed case studies with metrics

Cover trades (electrician/plumber), finance, and operations. Before/after data, named clients, timeframes.

03

Write detailed founder bio with career milestones

Substantiate '30+ years' with specific roles, companies, and achievements. Link LinkedIn prominently.

04

Launch blog with 4 articles

Topics: How AI receptionists work, Cost of missed calls for UK trades, AI voice agent comparison guide, GEO explainer.

05

Set up Trustpilot and G2 profiles with 10+ reviews

Request reviews from existing clients. AI models weight third-party review signals heavily.

06

Publish 5+ YouTube videos with chapters and transcripts

Demo calls, setup walkthroughs, industry explainers. YouTube has 0.737 correlation with AI citations — the strongest signal.

STRATEGIC INITIATIVES — 60-90 DAYS

this quarter

Longer-term but highest-lasting impact on AI visibility.

01

Build authentic Reddit presence

Participate in r/smallbusiness, r/automation, r/UKBusiness with genuine value-add. No self-promotion. Over time, organic mentions build citation signals. Critical for Perplexity.

02

Grow LinkedIn to 500+ followers

Weekly thought leadership posts, cross-post YouTube content as native video, tag company page.

03

Seek trade publication features and press mentions

Local Hampshire press, AI industry publications, small business media. Builds notability for Wikipedia.

04

Activate Meta ecosystem

Regular Facebook and Instagram content, community group participation. Required for Meta AI visibility.

05

Pursue Wikipedia article

Once notability criteria met (press coverage, reviews, third-party sources). Would add 15+ points to Brand Authority.
